

1 Projects outside of product design

Linux

01 – Linux is an open-source operating system created by Linus Torvalds in 1991. It's one of the pioneers of free and open-source software. In a large, ongoing collaboration involving many developers and major players in the technology field, it has been adapted for numerous platforms and devices.

Blender

01 – Blender is a free and open-source 3D software. It supports the entire 3D pipeline, from modelling, shading, and animation to rendering and cutting. It runs on Windows, macOS, and Linux, among others.

Firefox

01 – Firefox is a free, open-source web browser developed by the Mozilla Foundation. It focuses on user privacy and security. The browser runs on a wide range of devices and operating systems, including Windows, macOS, Linux, Android, and iOS.

Wikipedia

WIKIPEDIA

The Free Encyclopedia

01 – Wikipedia is a free, open, collaborative online encyclopedia. It is edited and maintained by a community of volunteer editors.

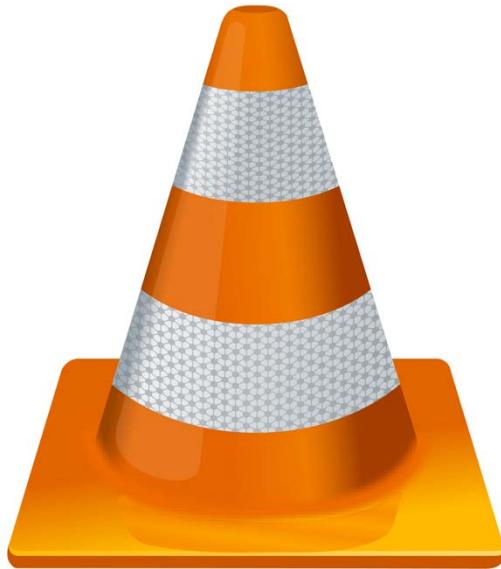

Wikipedia illustrates the power of community and knowledge sharing in a powerful way.

Open Street Map

Open Street Map

01 – OpenStreetMap (OSM) is a free, open-source, and collaboratively built map of the world. It was created and is maintained by a global community of volunteer mappers.

8 Projects outside of product design

Libre Office

01 – LibreOffice is a free and open-source office productivity software suite. It offers programs similar to the closed-source Microsoft Office Suite. It was created in 2010 as a fork of OpenOffice.org, itself a successor to StarOffice.

01 – Arduino is an open-source ecosystem for prototyping programmable electronic circuits. It exemplifies approachability made possible by open source and design. Before 2005, microcontrollers were the exclusive domain of engineers. Arduino did not just open the source code; it designed a physical language, the friendly blue boards with intuitive connectors, a comprehensive reciprocity that allowed designers to prototype without an engineering degree.

Open Source Ecology

01 – Open Source Ecology (OSE) is a project to design a self-sufficient modern civilisation. It's made up of a network of farmers, engineers, and supporters dedicated to creating and freely sharing blueprints for the Global Village Construction Set (GVCS). At this stage, the GVCS comprises 50 production and farming machines.

Slic3r

Slic3r
G-code generator

01 – Slic3r is a free, open-source 3D slicing engine that converts digital 3D models into G-code instructions for 3D printers. Launched in 2011 by Alessandro Ranellucci, it became the foundation of domestic 3D-printing. It is the basis of PrusaSlicer and many more.

13 Projects outside of product design

Bambu Studio

01 – Bambu Studio is a free, open-source 3D slicing software developed by Bambu Lab, based on PrusaSlicer and Slic3r. It mainly differentiates itself from PrusaSlicer by its user-friendly interface and multi-colour printing with the proprietary Automatic Material System by Bambulab.

Orca Slicer

ORCA SLICER

01 – Orca Slicer is a free, open-source slicer developed by SoftFever and is a direct fork of Bambu Studio, which is based on PrusaSlicer. Orca slicer and all the other slicers are based on, showing the power of open source and the power of shared R&D and shared knowledge.
